

Simplify Mac at work

Streamlined Mac management and security for IT

Managing Macs with Windows-centric tools slows IT teams down. Manual setups, fragmented workflows and limited visibility increase operational effort and make it harder to maintain consistent security.

With an Apple-first approach, IT teams can streamline Mac management while maintaining strong security. Automation and native workflows reduce manual work, improve visibility and support consistent security and compliance as environments scale.

With Jamf for Mac, IT can:

Streamline Mac management and security under one platform.

Eliminate **Windows-first** security challenges for Mac users.

Give Security teams the insights they need and keep the **Mac experience native.**

Increase **productivity** and **reduce risk.**

Jamf for Mac Capabilities
